

Vaxxed vs. Unvaxxed – What Does the Science Say?

by Robert F. Kennedy, Jr., Chairman

Children's Health Defense

Part six in our series of studies comparing health outcomes among vaccinated vs unvaccinated populations. Once again, chronic illness plagues the vaccinated cohorts. CDC and Pharma make great efforts to block researchers from performing these studies and to prevent the journals from publishing them.

Nonetheless, independent scientists have persisted and their reports have evaded the censors. Public health advocates willing to search can find them in quiet abundance among the peer-reviewed literature on Pubmed.

Vaccination increases the risk of asthma (11.4X) and hay fever (10X) in children with no family history of those disorders

"In multiple regression analyses there were significant ($P < .0005$) and dose dependent negative relationships between vaccination refusal and self-reported asthma or hay fever only in children with no family history of the condition and, for asthma, in children with no exposure to antibiotics during infancy."

Vaccination with DTP simultaneously with measles vaccine or DTP after measles vaccine increased risk of death (2.59X)

"Children who had received DTP simultaneously with MV or DTP after MV had significantly higher mortality ($MMR = 2.59$ [$1.32-5.07$]) compared with children having MV-only as their most recent vaccination."

Hepatitis B Vaccination Increases the Odds (3.1X) of a Multiple Sclerosis Diagnosis

"The OR of MS for vaccination within 3 years before the index date compared to no vaccination was 3.1 (95% CI 1.5, 6.3). No increased risk of MS was associated with tetanus and influenza vaccinations."

70% of SIDS Deaths Occur Within Three Weeks of DPT Vaccination

"In the DPT SIDS group, 6.5% died within 12 hours of inoculation; 13% within 24 hours, 26% within 3 days, and 37%, 61%, and 70% within 1, 2, and 3 weeks, respectively."

Leaving a lucrative career as a nephrologist (kidney doctor), Dr. Suzanne Humphries is now free to actually help cure people.

In her autobiography she explains why good doctors are constrained within the current corrupt medical system from practicing real, ethical medicine.

One of the sane voices when it comes to examining the science behind modern-day vaccines, no pro-vaccine extremist doctors have ever dared to debate her in public.
