I write today asking that RFK Jr. must preserve an independent decision process with CDC's ACIP and reverse the decision to remove the recent expert advisors and bypass his policies limiting access to COVID vaccines. ACIP must understand that currently available FDA-approved vaccines are safe and effective, and children, adults, and pregnant people all of whom rely on CDC ACIP vaccine recommendations for access to vaccines and insurance coverage. My uncle is alive because he got vaccinated and was able to fight against COVID, while his siblings all died because they did not take it. My grandparents and aging parents are still alive because they took the vaccines and boosters and were able to survive being afflicted with COVID because they had access to them and were readily available. My ACIP must preserve a universal recommendation for COVID vaccines for people of all ages, including children and pregnant people, at least twice annually.
