

---

**To:** Robert F. Kennedy Jr., Secretary of Health and Human Services, and members of the ACIP Committee

**From:** The Arc Montgomery County

**Docket:** CDC-2025-0024

**Subject:** Public Comment for the June 25-27, 2025, CDC ACIP Committee Meeting

For the last 67 years, The Arc Montgomery County has been an integral part of the Intellectual and Developmental Disability community in Montgomery County Maryland. Our services include early care and education for children, employment assistance, day services, respite services and more. It is in that capacity that we are urging the CDC Advisory Committee on Immunization Practices (ACIP) to keep objective fact, and scientific reasoning central to all decisions.

The Arc Montgomery County is deeply concerned about the recent termination of all 17 members of the CDC ACIP committee announced on June 9 by Robert F. Kennedy, Jr. These former members have an important role as independent expert scientists or clinicians on the ACIP committee with a crucial role in providing their understanding of the safety and efficacy of FDA-approved and authorized vaccines while also guiding insurance coverage and coverage for uninsured children through the Vaccines for Children program. Currently, vaccination rates for many infectious diseases are very low, and many communities across the US are directly affected by outbreaks of vaccine-preventable diseases such as measles, pertussis, and COVID. Many of these infections can cause serious and potentially lifelong consequences on health. In 2025, children should not die or acquire disabilities from infectious diseases because of a lack of access to affordable and effective vaccines.

Secretary Kennedy, Marty Makary, and Vinay Prasad have recently established policies that limit access to COVID vaccinations. Creating such barriers is harmful to public health. Everyone must have regular access to updated COVID vaccines and they must be widely available with full coverage by health insurance. The scientific evidence is irrefutable and it is a waste of precious resources and time to conduct additional efficacy studies, which only serve to sow doubt in vaccines. Receiving a COVID vaccine within the last year reduces the risk of symptoms, severe disease, disability, and death for people of all ages, including previously healthy people. The new policies create barriers to access to COVID vaccines, limiting access for children, pregnant people, and adults under age 65. These restrictions also create immense confusion among the public on the usefulness of COVID vaccines. We ask you to take action, follow the evidence, and reinstate universal COVID vaccine recommendations for people of all ages, twice a year, for all COVID vaccine formulations.

---

Any changes to vaccine-related policies requires a science and evidence-based approach entailing an open, and transparent process. Similarly at the FDA, the Vaccines and Related Biological Products Advisory Committee (VRBPAC) members were faced with undue influence by the leadership of the FDA including Vinay Prasad. He made a decision for the VRBPAC before they had a chance to consider and share vaccine recommendations. This also happened with the Influenza vaccine strain selection, which occurred in a closed-door meeting without recommendations from the FDA VRBPAC committee members, and no opportunity for public consideration or comment. We beseech this committee to ensure that all vaccine policy decisions are considered, evaluated, and concluded using open and transparent processes, all of which are hallmarks of democracy.

Thank you for your consideration.

The Arc Montgomery County
