

Public Comment to the Advisory Committee on Immunization Practices (ACIP)

Date: June 19, 2025

Submitted by: Adrianna Williams

Introduction

I am Adrianna Williams, a concerned citizen who has spent ample time researching the risks of vaccines and advocating for the abolishment of unethical medical interventions. My interest in this issue stems from hearing personal experiences with vaccine-related adverse events in families and work and communities questioning the safety of immunization programs. I have closely followed discussions on platforms like X, such as STOP THE SHOTS community where studies and information on resources are shared highlighting vaccine dangers (@AdriannaWi36073), and I draw from resources like learntherisk.org, which compiles evidence of vaccine harm. As a concerned citizen, I submit this comment to urge the ACIP to halt its 2024–2025 COVID-19 mRNA vaccine recommendations and abolish all vaccines due to their unacceptable risks to public health.

Background

This comment addresses the ACIP's recommendations for the 2024–2025 COVID-19 vaccine schedule, as outlined in the Federal Register notice for the June 2025 meeting, and extends to the broader ACIP process for endorsing vaccines on childhood and adult immunization schedules. I specifically challenge the continued promotion of mRNA COVID-19 vaccines (e.g., Pfizer's Comirnaty and Moderna's Spikevax) and routine vaccines like MMR, DTaP, and polio. My position is that all vaccines, particularly mRNA formulations, pose significant health risks that far outweigh any claimed benefits, and I demand their immediate discontinuation.

Analysis

The ACIP's vaccine recommendations, including the 2024–2025 COVID-19 mRNA vaccines, disregard mounting evidence of harm, as highlighted by my X feed (@AdriannaWi36073), learntherisk.org, and the STOP THE SHOTS community.

- **mRNA COVID-19 Vaccine Risks:** A June 12, 2025, post on my X feed references a *Cureus* study (retracted but widely discussed) re-analyzing Pfizer's phase 3 trial data, which reported significant increases in serious adverse events (SAEs) like cardiac issues, neurological disorders, and deaths in the vaccinated group. The study argues mRNA vaccines bypassed rigorous safety testing. Despite its retraction, these concerns align with learntherisk.org's citation of VAERS data, noting over 1 million adverse events and thousands of deaths linked to COVID-19 vaccines by 2023. Though not all are causally confirmed, this suggests a safety signal the ACIP has failed to investigate thoroughly.
- **General Vaccine Dangers:** Learntherisk.org compiles studies linking vaccines like MMR and DTaP to neurological disorders, autoimmune diseases, and sudden infant death syndrome (SIDS). A 2017 study (Mogensen et al., *African Health Sciences*) found DTP-vaccinated children in Guinea-Bissau had a 5-fold higher mortality rate than unvaccinated peers, contradicting claims of universal vaccine safety. Additionally, learntherisk.org cites the National Childhood Vaccine Injury Act, noting over \$4 billion paid for vaccine injuries since 1986, signaling systemic harm the ACIP ignores.

- **Unintended Consequences:** Vaccine mandates erode public trust, as evidenced by my X feed and STOP THE SHOTS discussions. A June 12, 2025, post states, “All vaccines are not safe. We must rid of them completely, ASAP!!” reflecting widespread skepticism. Learntherisk.org suggests vaccines contribute to chronic disease epidemics, citing a 2011 study (Goldman & King, *Vaccine*) linking increased vaccine doses to rising autism rates. While correlation is not causation, the ACIP’s refusal to fund independent studies fuels distrust and division.
- **Flawed Risk-Benefit Analyses:** The ACIP relies on manufacturer-driven, short-term trial data, ignoring long-term risks. The CDC admits rare myocarditis cases post-mRNA vaccination (≈ 12.6 per million second doses in 12–39-year-old males), but learntherisk.org argues VAERS underreports these incidents. A 2024 study (Speicher et al., *OSF Preprints*), shared on X, found residual plasmid DNA in mRNA vaccine vials, raising concerns about potential genomic harm—unaddressed by the ACIP.
- **Lack of Transparency:** The ACIP must disclose vaccine ingredients and manufacturing details. Learntherisk.org highlights toxins like aluminum and formaldehyde, which may accumulate and cause neurological damage. The agency’s dismissal of these concerns as “misinformation” without robust evidence alienates families seeking answers.

Recommendations

I urge the ACIP to:

- **Halt All Vaccine Recommendations:** Suspend the 2024–2025 COVID-19 vaccine schedule and all routine vaccines until independent, long-term safety studies, free from pharmaceutical bias, are conducted.
- **Abolish Vaccine Mandates:** Eliminate federal and state mandates to prioritize informed consent and medical freedom.
- **Fund Independent Research:** Support studies on vaccine-linked chronic diseases, like autism and autoimmunity, as urged by learntherisk.org.
- **Reform Adverse Event Reporting:** Overhaul VAERS for mandatory, active surveillance to address underreporting, as noted on X and learntherisk.org.
- **Engage Public Concerns:** Host transparent forums to discuss studies from my X feed, learntherisk.org, and STOP THE SHOTS, fostering trust.

Conclusion

The ACIP’s endorsement of vaccines, including mRNA COVID-19 vaccines, ignores evidence of harm, from SAEs to chronic disease links, as shown on my X feed (@AdriannaWi36073), learntherisk.org, and STOP THE SHOTS. Toxic ingredients, underreported injuries, and eroded trust demand action. I recommend halting all vaccine recommendations, abolishing mandates, funding independent research, reforming VAERS, and engaging the public. Vaccines, in their current form, must be abolished to protect our children and communities.
